

Paytm VyaparDost AI

The zero-touch AI business partner that turns transaction signals into revenue action.

VOICE-FIRST

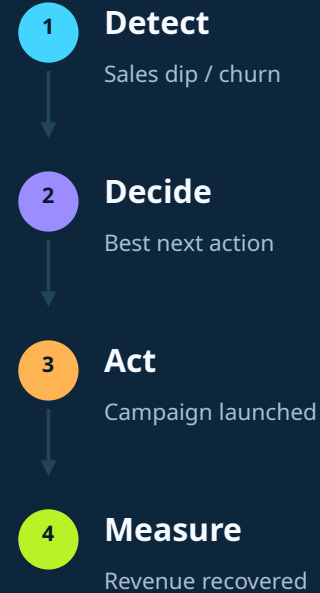

INDIA-FIRST

ACTION-LED

Built by Niveditha • Team Multiverse

“Find the opportunity. Take the action. Prove the impact.”

FROM DATA → TO GROWTH

Merchants have data — but not time to act on it.

A busy kirana owner should not need to open dashboards, interpret charts, and design campaigns just to recover lost demand.

DATA IS PASSIVE

Transactions tell the story
after the sale — not the next move.

TIME IS SCARCE

Merchants work long hours.
Manual analysis becomes “do it later.”

OPPORTUNITY GOES COLD

Lapsed regulars, weak time-slots,
and low-performing offers stay hidden.

THE CURRENT LOOP

The gap is not “more analytics”. The gap is ****proactive execution****.

14 h

merchant workday pressure

0

manual steps to trigger with AI

1 loop

observe → act → measure

Meet VyaparDost: an AI teammate, not another dashboard.

It proactively spots a growth opportunity, proposes the next-best action, executes with approval, and closes the loop with measurable results.

MERCHANT

“My sales are down this week. Help me grow.”

No forms. No digging through reports.

VYAPARDOST AUTONOMOUS LOOP

1

OBSERVE

Detect churn / sales dip

2

DECIDE

Choose next-best action

3

ACT

Launch approved campaign

4

LEARN

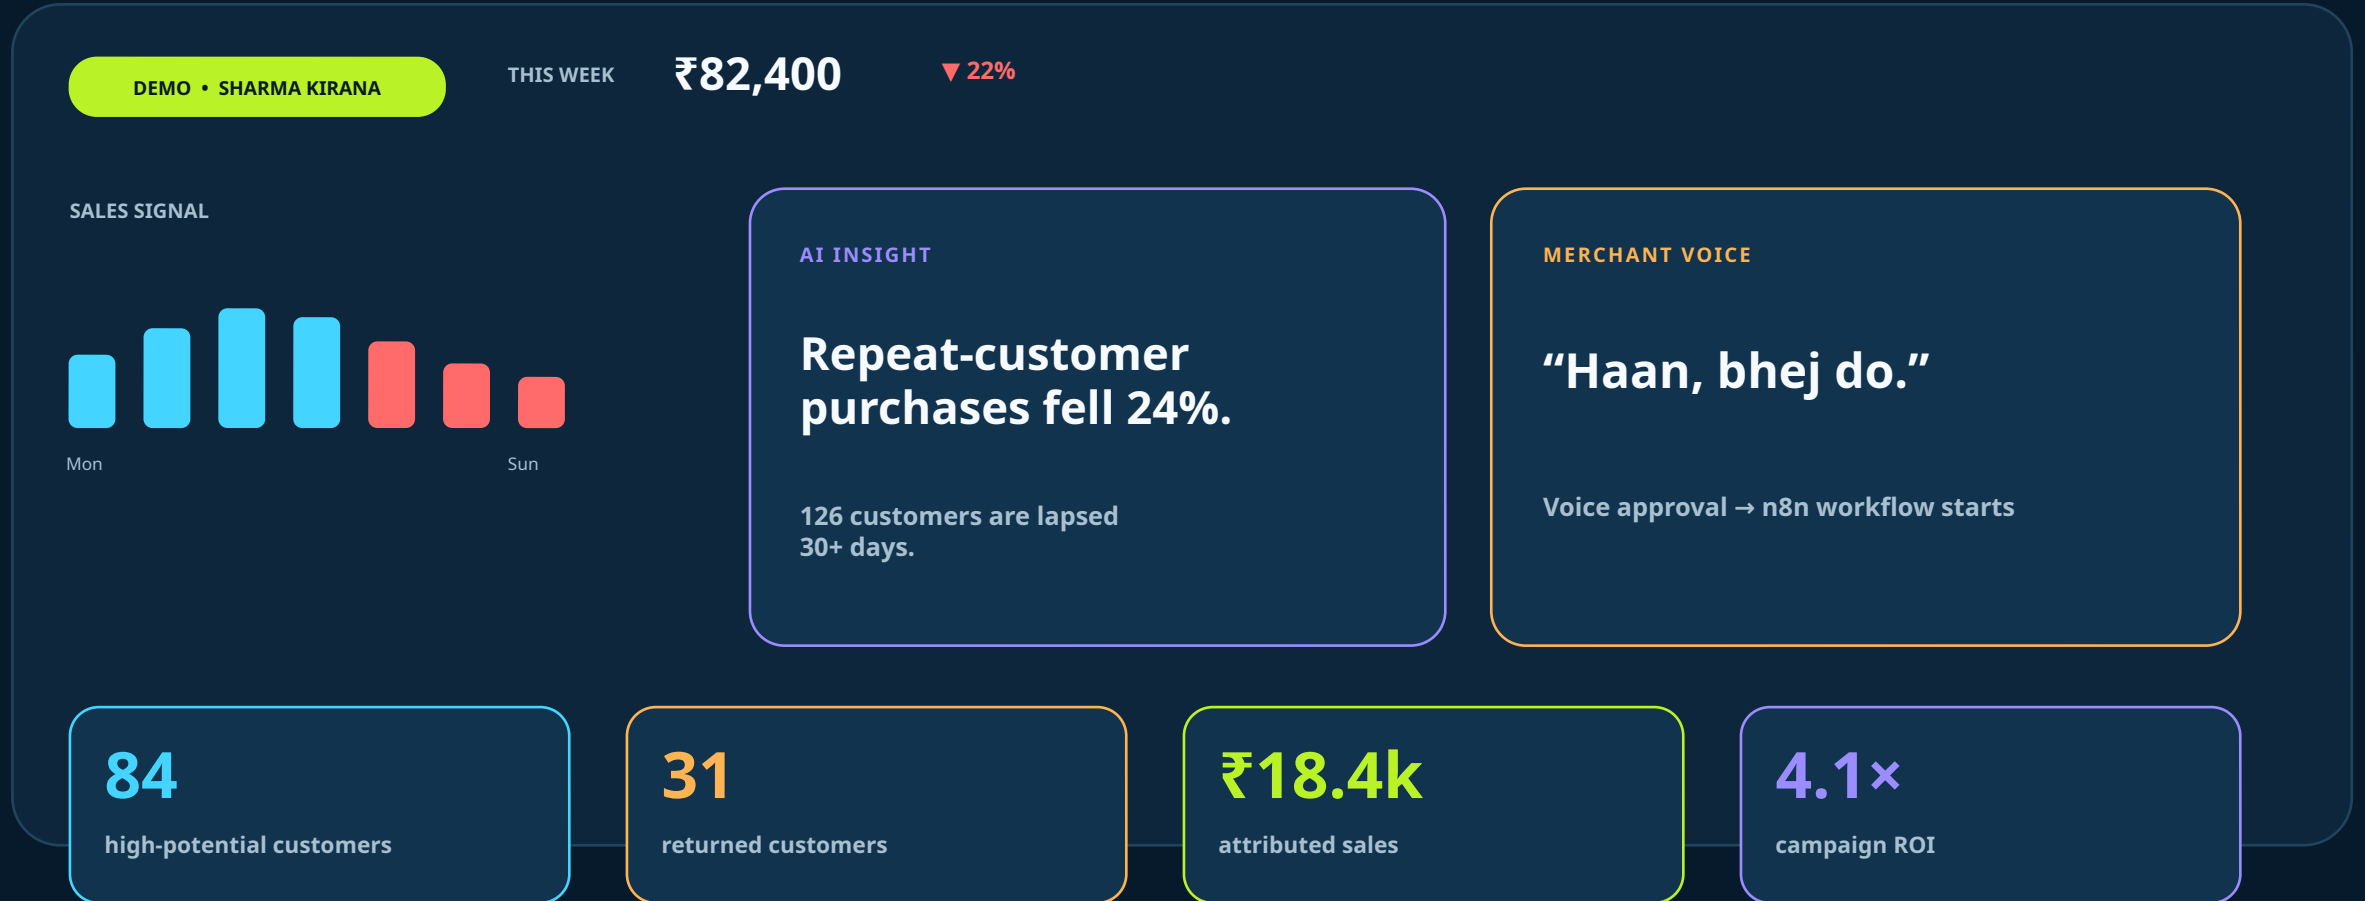

Measure response + ROI

LIVE OPPORTUNITY 126 lapsed customers → ₹20 win-back offer → voice approval → campaign

The AI handles the work; the merchant stays in control.

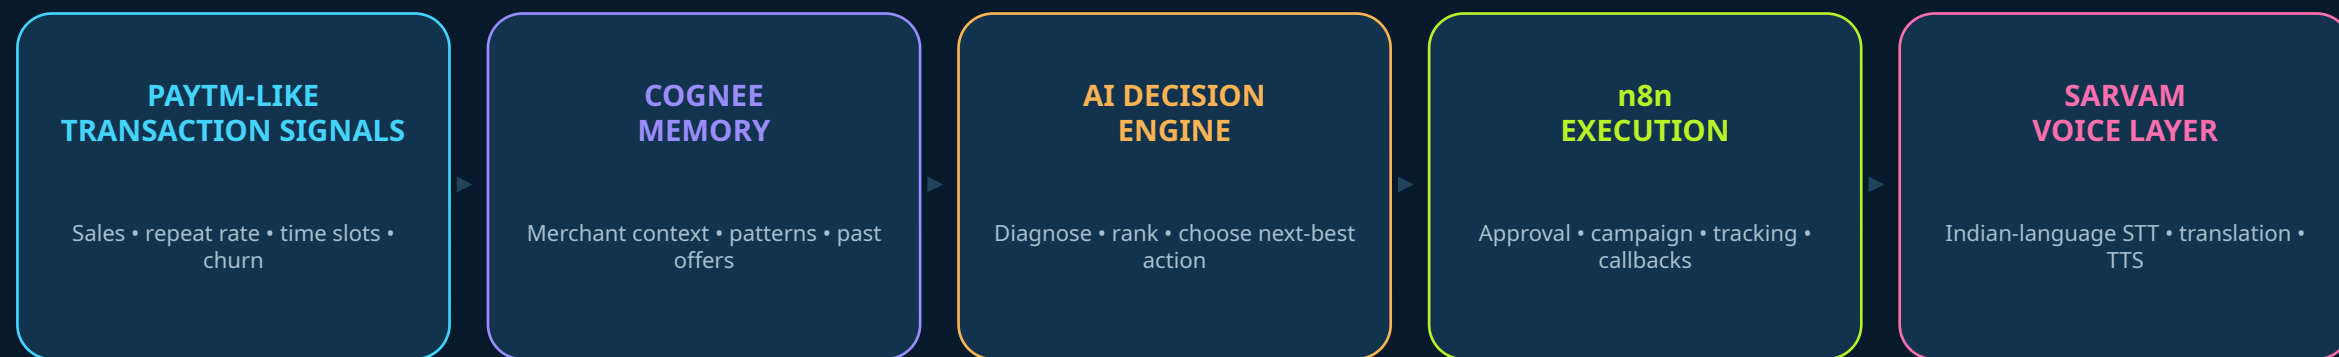

One merchant. One voice command. One growth loop.

Use synthetic transaction data for the prototype and show every AI decision + automation step visibly.

Three sponsor technologies. One continuous growth loop.

The prototype uses synthetic merchant/customer data; integrations can be swapped for real production APIs later.

CLOSED-LOOP LEARNING Campaign response → transaction outcome → ROI → next recommendation

Human approval is the control gate for customer-facing actions.

MEMORY

Cognee can store + recall context across sessions.

LANGUAGE

Sarvam supports Indian-language speech + translation + TTS.

What Paytm gets: more merchant revenue with less manual effort.

The hackathon prototype demonstrates measurable outcomes using synthetic data; these are example demo results, not production claims.

31

customers recovered

₹18.4k

attributed sales

24.6%

campaign conversion

42%

fewer manual follow-ups

EXAMPLE DEMO METRICS

Sales recovery

3.2×

Customer reactivation

24.6%

GROW

Merchants get
proactive
revenue
opportunities

TRUST

Merchant approves
customer-facing
actions

SCALE

One workflow can
run
across thousands of
merchants

North-star metric: incremental merchant revenue created per AI-assisted campaign.

Every merchant has data. VyaparDost turns it into action.

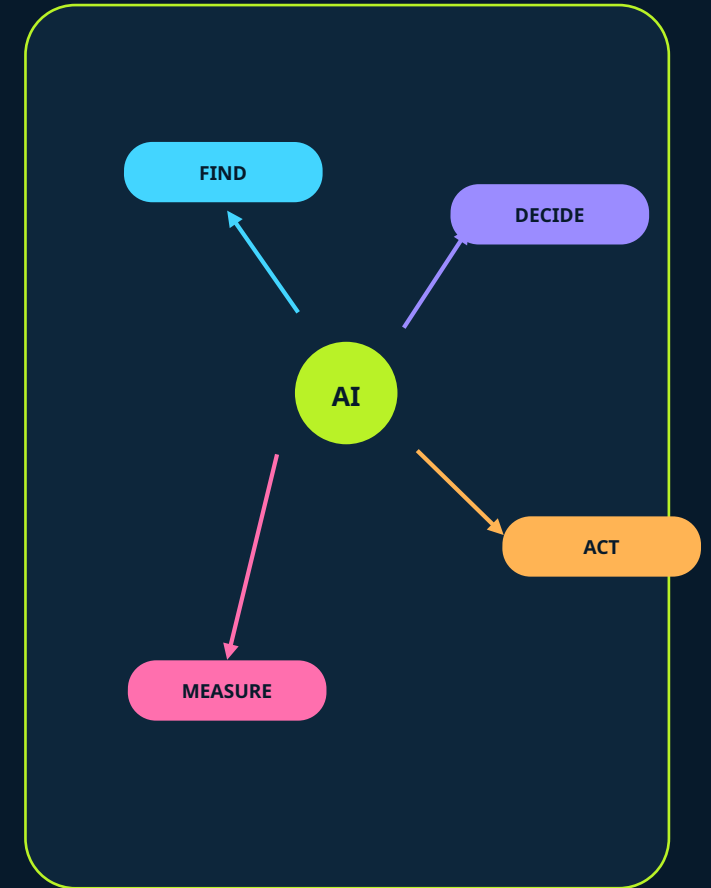

A proactive, multilingual AI business partner that sees the opportunity, gets approval, executes the workflow, and proves the result.

*“Don’t ask the merchant
what to do next.
Let AI find the next move.”*
